

TOYOTA MOTOR EUROPE NV/SA

Avenue du Bourget 60 - 1140 Evere, Belgium

We are currently recruiting for 2 internships in our Model-Based Design area. I have attached the links to both internships here: <https://intern-toyota-europe.icims.com/jobs/3344/internship---development-of-a-simulation-model-for-anisotropic-bushing-behaviour/job?mode=view> & <https://intern-toyota-europe.icims.com/jobs/3343/internship---development-of-ai-based-time-domain-surrogate-modelling-process-for-real-time-applications/job?mode=view>

We are actively recruiting for both right now, so I would encourage any students who express an interest to apply at the links above as soon as possible. Now, we are particularly short on applications for the internship focused on the development of an AI Based Time Domain Surrogate Modelling Process for Real Time Applications – we're looking for a candidate who is very comfortable with machine learning/AI skills & knowledge, including Matlab & Python skills if possible.
